

ROTADYNE

DESIGN TO MANUFACTURE

WHAT IS D2M?

Take your smart ideas and turn them into sought-after products. Rotadyne has earned an enviable reputation for taking products from a raw concept, and transforming them into market leaders.

Starting in the design room with our creative design-engineering team, we support our customers from the initial

scope of works, all the way through to concepts, designs, working prototypes, manufacturing and fully assembled products.

Whether working in collaboration with other methods of manufacturing, or created entirely from rotationally moulded plastic components, our team of dedicated experts have the

skills to guide you through the entire production cycle, paper to product. We call this holistic approach 'Rotadyne D2M'. Design to Manufacture. From straightforward to complex, at Rotadyne, there are no limits to our imagination and manufacturing expertise.

We guide you through it all.

1

DESIGN

You tell us your idea.
We help you with research and design to develop a product which checks all the boxes and flourishes it to its full potential.

TOOLING

2

We design your manufacturing tools with the goal of optimisation.
You experience the peace of mind knowing your equipment is being sourced, stored and maintained by the experts.

3

MANUFACTURING

We make your purpose designed custom product, with a high quality guarantee which ensures all parts are trimmed, polished, tested, assembled and packaged for shipping to your preferred location.
